1.26.2022

Mike Messinger, Laura Geyer and Khaled Shami, partners in the Vorys Washington D.C. office, will host a webinar which will examine how to scope ongoing R&D and flag pertinent intellectual property (IP). The webinar will cover what is patentable and how to identify candidate inventions for patent screening review. It will also take look at recent software patent trends and special challenges unique to machine learning (AI/ML), cloud computing, and Software-as-a-Service (SaaS) inventions.

This webinar also shows how engineers can navigate the patent drafting and examination process for software patent applications. Finally, it will look at pitfalls and Do's and Don'ts for engineers and software companies with respect to discussing a new idea/product and publication as part of an invention harvesting process.
